## Summary

James is a results-driven, articulate, and analytical, technical leader, with more than fourteen years experience in various areas of systems analysis, software development, and development management. He has strong architecture and integration problem-solving skills and is an expert in open source web development technologies. James excels at building development teams and leading them towards success, and can communicate highly technical concepts to non-technical people.

### *Experienced in:*

- Engineering all aspects of web applications including databases, services, and user interfaces
- Managing requirements and project schedules
- Mentoring and leading teams of developers
- Implementing software development life cycle policies and procedures
- Managing and supporting multiple projects
- Adapting quickly to changing technical environments and requirements
